

## Project Design Phase

### Solution Architecture

Date	15 February 2025
Team ID	LTVIP2025TMID59424
Project Name	Citizen AI – Intelligent Citizen Engagement Platform
Maximum Marks	4 Marks

### Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

### Solution Architecture – 5 Key Points

1. **Layered Architecture:** The system follows a modular structure—Frontend (HTML, JS), Backend (Flask + FastAPI), AI Layer (OpenAI/Granite), Database (SQLite), and Dashboard (Chart.js).
2. **AI-Driven Communication:** Uses IBM Granite/OpenAI for real-time, intelligent chatbot replies and sentiment analysis on citizen feedback.
3. **Offline & Scalable:** Designed to work offline using SQLite and Flask, with future scalability via cloud (IBM Cloud, Docker) and mobile platforms.
4. **Dynamic Dashboard:** Admin dashboard visualizes sentiment trends using real-time charts and enables data-driven governance.
5. **Future-Ready Design:** Easily extendable for multilingual support, geo-tagging, role-based dashboards, and predictive analytics.
